

IDESS Maritime Centre (Subic) Inc.

Maritime Resource Management Course

Description:

The Maritime Resource Management Course is a further development of the original SAS Bridge Resource Management Course. The original course was developed in close co-operation by the following eight organisations: Dutch Maritime Pilots' Corporation, Finnish Maritime Administration, Norwegian Shipowners' Association, SAS Flight Academy, Silija Line, Swedish Maritime Administration, Swedish Shipowners' Association and The Swedish Club. The first Course was launched in June 1993. It is about the use and co-ordination of all the skills, knowledge, experiences and resources available to the crew to accomplish or achieve the established goals of safety and efficiency. The MRM Course includes the principles of Bridge Resource Management as outlined in Section B-VIII/2, part 3-1 of the STCW Code.

The MRM course is:

- Changing attitudes – not skills
- Focusing crews as intact teams, not a collection of competent individuals
- Addressing crewmember attitudes and behaviours
- Providing two sets of objectives:
 - Training Objectives
 - Specific Behavioural Objectives
- Providing Computer Based Training for transfer of facts
- Utilising case studies and human interaction to change attitudes
- Originally based on the airline industry Crew Resource Management

Entry Standards:

This course is open to ships' officers and engineers, maritime pilots and shore-based personnel.

Minimum number of participants is four (4) and maximum is eight (8).

Certification:

A certificate of successful completion shall be issued to those participants who successfully complete the course

Accreditation:

Swedish Club (P&I)
Panama Maritime Authority

Duration:

4 days
